

# Microsoft's Windows 8

# Microsoft's Windows 8

## General Comments

This page is intended to provide information and assistance for Travelport customers running Microsoft's Windows 8 operating system who are using Travelport software to connect to the Apollo and Galileo host systems..

In general, if the Travelport software in which you are interested works properly on Windows 7, that same software will work properly on Windows 8.

*Microsoft .Net 2.0 or above needs to be installed,*

- The correct version of .NET is included with Windows 8. However, It is not activated by default.
- To enable
  - Open Control Panel
  - Select Programs And Features
  - Select "Turn Windows features on or off" (left hand column)
  - Place a check mark in the .NET Framework 3.5 (includes .NET 2.0 and 3.0) box
  - Follow on screen instructions
